

Mount vesuvius

Where is Mount Vesuvius ?

It is located in southern **Italy** in the Bay of **Naples** on the plane **Campania**.

Mount Vesuvius

The most deadly eruption of **Mount Vesuvius** is back in **79 AD**. It is the deadliest volcano in the whole of Europe .It buried the famous roman city called **Pompeii** in ash.

Is it still active ?

It is still **active** but **scientists** say it is soon going to be **dormant** .

How big is it ?

Mount vesuvius is humongous it is **1,281 m** .

Its second craiter

Most **volcanoes** do not have second **crater**. But **mount vesuvius** does meaning the lava can reach up to **2,000 f.** it's probably why it is so **dangerous**.

The ash preserve pompeii

Did you know most of the things we know about Romans come from Pompeii because it was covered in ash it was preserved for over 2,000 years.
