

all about snow leopards and Komodo dragons

+how they have adapted to
their environments

Hello , I'm Snowy the
snow leopard and
this is my
presentation about
snow leopards and
Komodo dragons

Snow leopard

All about snow leopards

Snow leopards are basically leopards that live in snow . They are related to cats (like all leopards) and they live in the Himalayas .

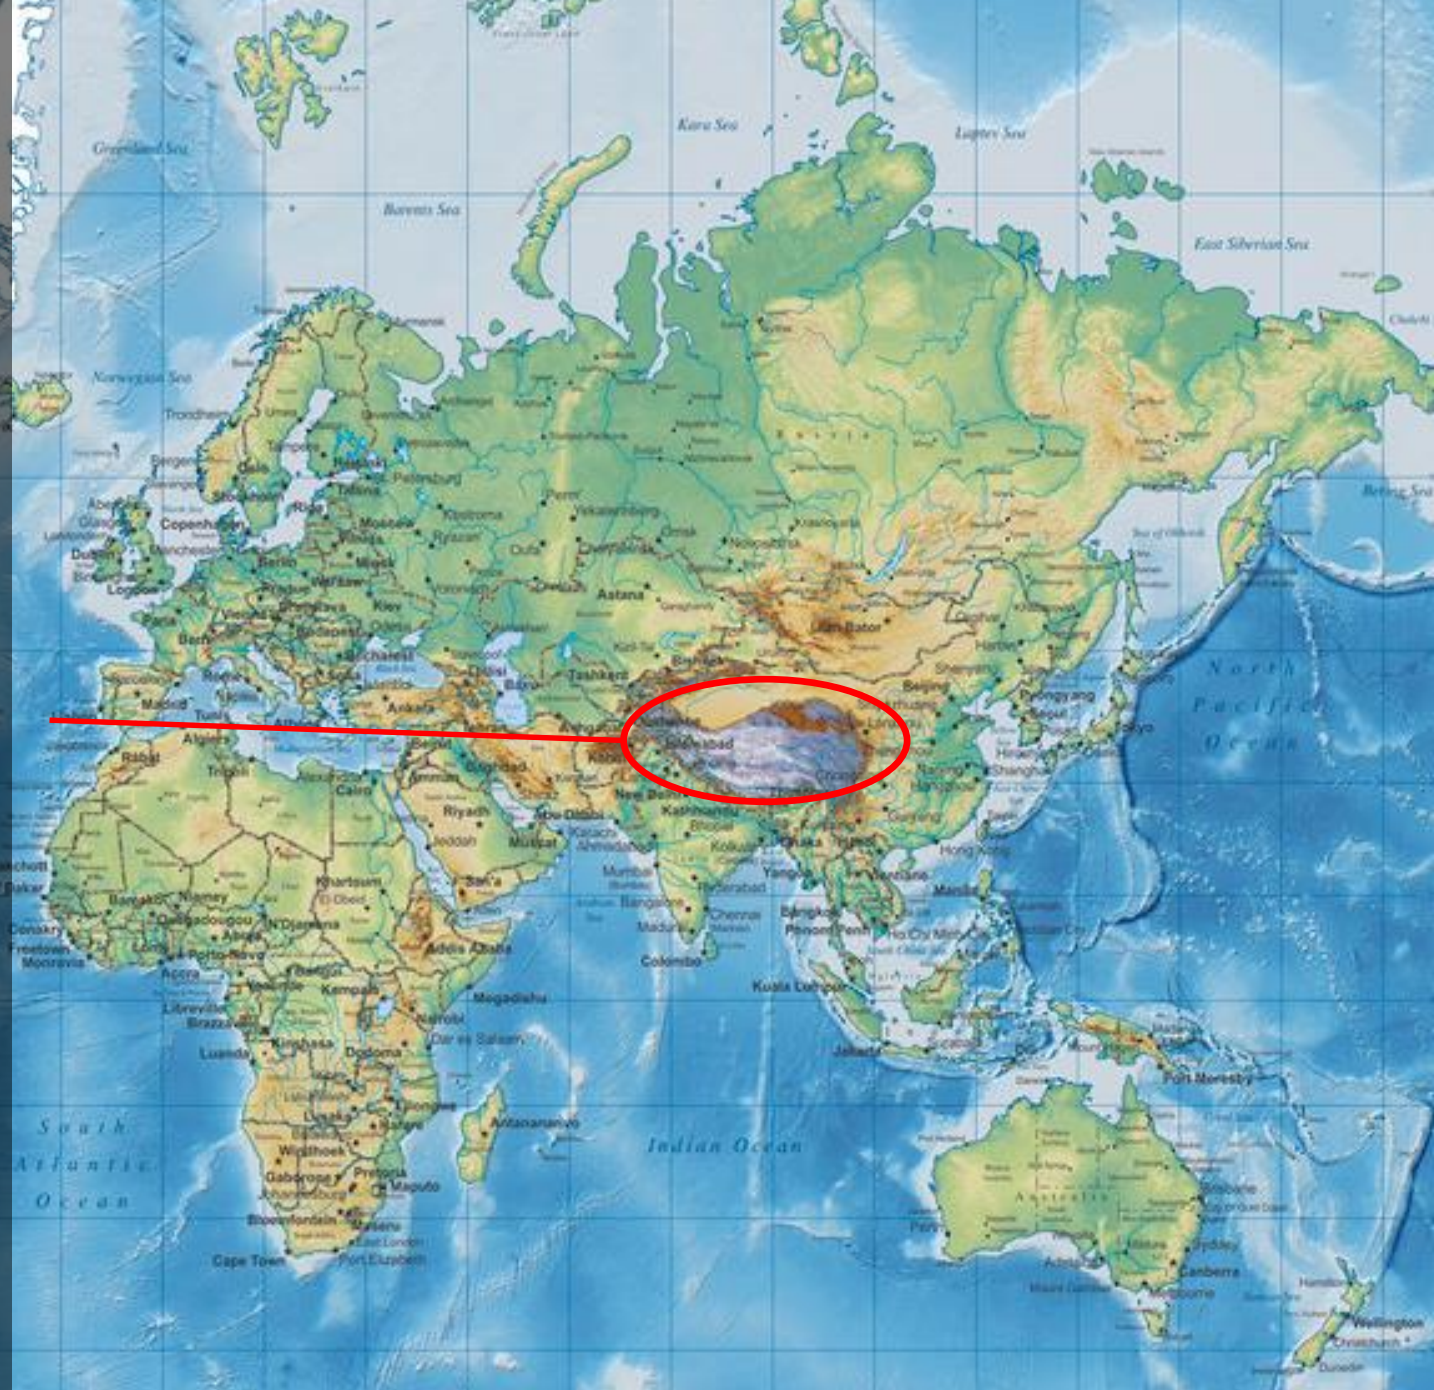

Snow leopards have a whiteish coat with black spots.

They are carnivores (which means they eat meat)

Snow leopards are under threat.

Where in the world

How they have adapted to their environments

- Camouflaged
- Fur
- Long tail for balance
- Good eyesight

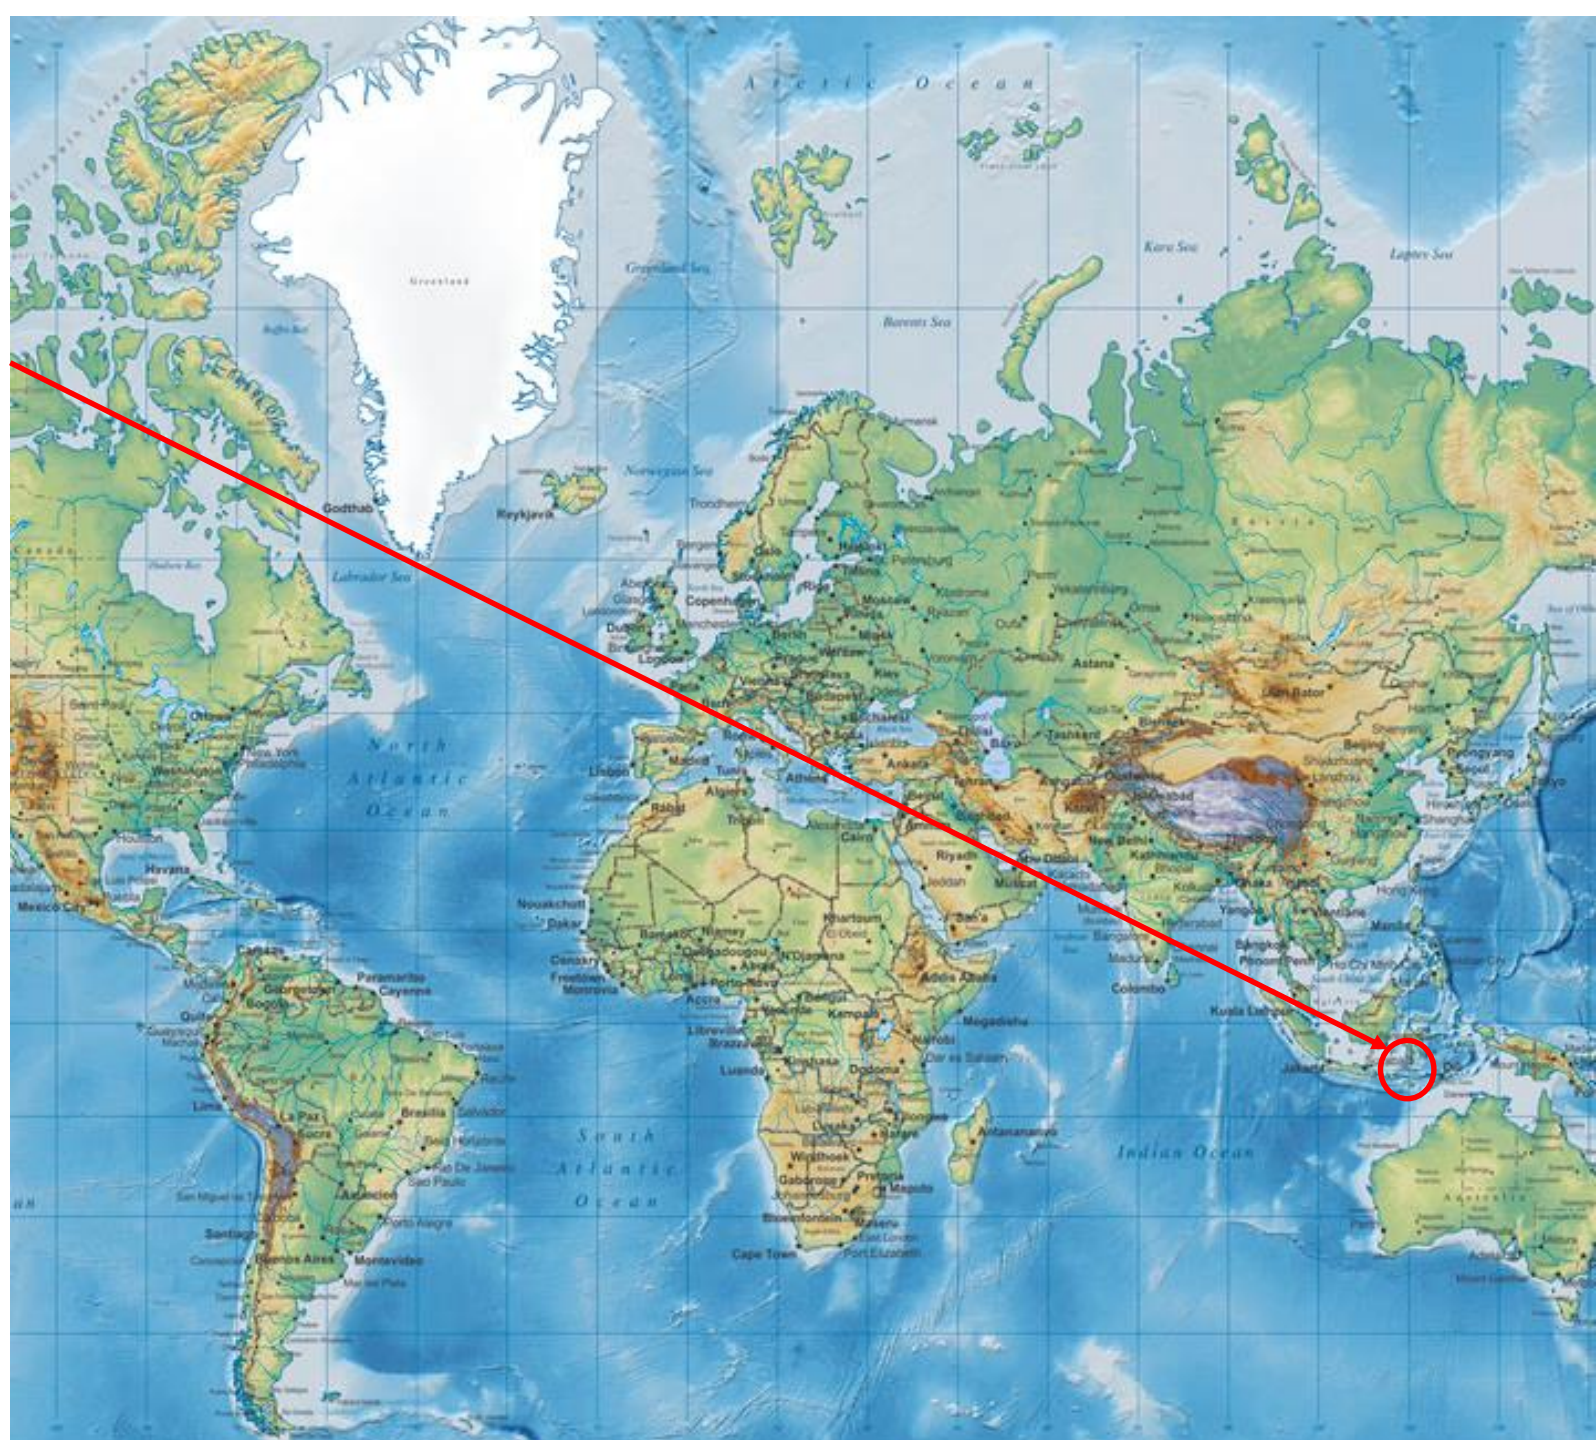

Komodo dragon

All about Komodo dragons

- Komodo dragons are the largest lizard species on Earth
- These monsters can kill a human in just 2 hours
- They have scales
- They are carnivores – just like the snow leopards !

Where in
the
world?

How have they adapted to their environment

- They can regulate their body temperature
- Good senses
